

Surveillance Specialist Group Presents:

The UASVS

The UASVs (Unattended Surveillance Vehicle System) was designed for the surveillance conscious subject. Most surveillance vehicles have one huge limitation, the operator/investigator. Our UASVS will convert any surveillance vehicle into a surveillance van or UAV (Unattended Vehicle) in sixty seconds. In fact it takes longer to start your laptop (running windows).

The UASVS has been a dream of Private Investigator/ Engineer Dwayne Denny every since he visited the Sirchie in New Jersey and saw the price list of their video periscope. Surveillance Specialist Group has been installing remote access cameras systems in homes and businesses for years. We have now taken this technology mobile. This system can record locally to your laptop or to one of our mobile DVR's. What really makes this system unique is its ability to be monitored, recorded and controlled over the internet from anywhere in the world using wifi or wireless broadband technology.

This system (as shown) features excellent picture quality at 530 lines and has extremely high zoom capability. The color camera combines a new exceptionally high 36X zoom lens with an expansively wide/telephoto horizontal field of view. The camera incorporates a 1/4 type EXview HAD™ CCD for high sensitivity in extreme low light environments. For optimized sensitivity in both day and night-time shooting applications, the camera incorporates an Auto ICR function and excels in security domes and traffic monitoring applications. We also offer less expensive camera options, and camera drives.

The mobile surveillance investigator can take advantage of the cameras ability to look out of any window, at all day long. This gives the investigator the ability to park in locations less likely to drawing less attention than facing a subject location would. This feature combined with motion detection software or hardware allows the seasoned investigator the ability to catch up on notes or other administrative duties. Video is steadier than, and recording times are longer than surveillances conducted with consumer video cameras. The UASVS is simply the most cost effective surveillance system you will ever fall in love with.
